

CLAIMS

1. A continual-image processing device comprising:  
a continual-image determination processor that  
determines whether a plurality of images are obtained in a  
5 continual photographing operation; and  
an image processor that continually performs a common  
operation on said plurality of images when it is determined  
by said continual-image determination processor that said  
plurality of images are obtained in said continual  
photographing operation.

TREC010-E812422360

10 2. A device according to claim 1, wherein said image  
processor continually reproduces said plurality of images.

15 3. A device according to claim 1, wherein said image  
processor continually reproduces said plurality of images at  
a same interval as that of said continual photographing  
operation.

4. A device according to claim 1, wherein said image  
processor continuously deletes said plurality of images.

20 5. A device according to claim 1, wherein said  
continual-image determination processor determines whether  
said plurality of images are obtained in said continual  
photographing operation, by reading image recording  
information recorded for each of said plurality of images.

25 6. A device according to claim 5, wherein said image  
recording information comprises a continual-image flag

recorded in a header area corresponding to an image recording area in which an image is recorded.

7. A device according to claim 1, wherein said continual photographing operation is performed by an electronic still camera.

8. A continual-image processing device comprising:  
a continually recording processor that continually records a plurality of images at a predetermined interval;  
and

an image processor that continually performs a common operation on said plurality of images.
